

WPF GridView with edit and EcoBinding

This sample has a GridView; I took it more or less from MS and added EcoBinding to it:

It shows how you can do the rendering stuff i Xaml that you did in the Handle columns before:

```
<GridViewColumn.CellTemplate>  
  
</CellTemplate>  
  
<StackPanel Orientation="Vertical">  
  
<TextBlock Text="{ecoBinding Expression=if( Employees.LastName.isstring() works at {self.JobName.isstring() and is number {self.Number.isstring()>  
  
</TextBlock>  
  
</StackPanel>  
  
</CellTemplate>  
  
</GridViewColumn.CellTemplate>
```

The attachment function in this KB has issues. Here is a download link for the sample GridWithEdit.rar
